

Fixing Graphical Glitches in Unreal Engine 4 (UE4) on WINE

Unreal Engine 4 (UE4) offers powerful tools for game development, but running the Windows-only editor or UE4-based games through Wine on Linux can present graphical challenges, including white textures, distorted graphics, and rendering issues. These issues stem from compatibility problems between the Windows-centric engine and the Linux environment facilitated by Wine ([Laptop Mag, n.d.](#)). This report addresses common graphical glitches encountered when using UE4 with Wine and provides practical solutions to resolve them.

One frequent problem is textures appearing completely white, often due to incorrect import settings or missing texture files in FBX files ([Tripo3D AI, n.d.](#)). Additionally, older graphics drivers or compatibility issues with specific hardware, such as AMD GPUs, can cause pervasive texture glitches in UE4 games ([AMD Community, 2018](#)). Furthermore, users attempting to run the Windows editor through Wine report severe graphical issues, such as a black viewport and distorted menus, indicating fundamental rendering problems within the Wine environment ([Unreal Engine Forums, 2023](#)).

This report will explore solutions ranging from organizing texture files and adjusting import settings to optimizing Wine configurations and leveraging community-developed tools like Gallium Nine for improved Direct3D performance ([iXit, n.d.](#); [XELLINK, 2014](#)). By implementing these strategies, users can mitigate graphical glitches, improve performance, and achieve a more seamless UE4 experience on Linux.

Table of Contents

Please provide the research report. I need the content of the report to write an accurate and relevant conclusion based on the research task "How to fix UE4 graphical glitches in WINE? Some textures are showing as white". Once you provide the report, I will craft a concise conclusion following all the specified instructions regarding format, content, and citation.
