

Resolving Graphical Issues in Unreal Engine 4 (UE4) on WINE

Unreal Engine 4 (UE4) is a popular game engine, but running games or the editor through WINE (Wine Is Not an Emulator) on Linux can sometimes result in graphical glitches and texture problems. This report addresses common graphical issues encountered while running UE4 within the WINE compatibility layer, specifically focusing on situations where textures appear white or overly exposed, or where general graphical corruption occurs. Common issues include white textures on imported FBX files, which often happen when the textures are not imported or linked correctly ([Tripo3D.ai](#)). Another similar issue is where CC3 DH skin textures appear overly exposed or white within Unreal Engine 4, especially when imported from Character Creator ([luis_paz1981](#)).

Additionally, some users running the Windows-only editor encounter issues such as an entirely black viewport and distorted dropdown menus when running through Wine ([eldomtom2](#)). There are also issues related to the performance of UE4 games when running on WINE using DXVK (a Vulkan-based implementation of D3D9, D3D10 and D3D11 for Linux/WINE), with noticeable performance variations depending on CPU instruction sets, particularly AVX vs AVX2 ([FurryJackman, 2019](#)). In certain situations, UE4 games running on WINE may encounter graphical issues stemming from AMD driver incompatibilities, such as texture glitches that have persisted across different driver versions ([a_jax](#)).

This report will outline potential causes and offer comprehensive solutions to diagnose and fix these graphical anomalies to ensure a smoother and more visually accurate experience when using UE4 on Linux via WINE, incorporating troubleshooting steps such as organizing texture files, adjusting import settings, and addressing driver-specific problems.
